

## Downloading and Installing Ad-Aware SE Personal v1.06

1. Click on link Ad-Aware SE Personal v1.06.
2. A window may appear asking: "Do you want to run or save this file?" Choose "Save."
3. When it asks you the location in which you want to download this file, select "Desktop."
4. Choose "Save."
5. Allow the download to run. Once it is finished, choose either "Run" or "Open."
6. It may pop up a security warning asking: "Are you sure you want to run this software?" Choose "Run."
7. The installation wizard will start. Choose "Next" to begin the installation.
8. Click the checkbox stating that you agree to the license agreement. If you do not agree to the terms, then it will not allow you to install the software.
9. Choose "Next" to configure settings.
10. Choose "Next" at the installation directory location.
11. Choose "Next" on the page asking if you want "Anyone who uses this computer" to have access to the Ad-Aware application.
12. Choose "Next" to begin the installation.
13. Status bar will appear as it installs. (Wait until it completes installation.)
14. When installation completes, a window will appear showing three (3) options with checkmarks in each box. Uncheck the box that states: "Open the help file now."
15. Choose "Finish."
16. A window will appear "Performing Web Update."
17. Once the web update completes, a system scan will start. (Wait until it completes system scan.)
18. When the scan completes, choose the tab that says: "Critical Objects."
19. Highlight one of the objects.
20. Right-click on that same object.
21. Choose the option that says: "Select All Objects."
22. Choose the tab that says: "Negligible Objects."
23. Highlight one of the objects.
24. Right-click that same object.
25. Choose the option that says: "Select All Objects."
26. On the bottom right-hand corner, choose "Next."
27. The application will quarantine these items.
28. Your scan is complete.

Some things to keep in mind:

If you choose to run this application again later, you can find this program in your "Start Menu" and launch it. Make sure that you update your definitions each time you run the application.

This is only a stripped down version of the software. Some options may not be available with upgrading retail version, but for all intents and purposes, this should most likely suit your needs.
