

Downloading and Installing Java v1.5.0_02

1. Click on link Java v1.5.0_02.
2. A window may appear asking: "Do you want to run or save this file?" Choose "Save."
3. When it asks you the location in which you want to download this file, select "Desktop."
4. Choose "Save."
5. Allow the download to run. Once it is finished, choose either "Run" or "Open."
6. It may pop up a security warning asking: "Do you want to run this software?" Choose "Run."
7. The installation wizard will start. Click the button stating that you agree to the license agreement. If you do not agree to the terms, then it will not allow you to install the software.
8. Choose "Next" to configure settings.
9. Choose "Next" at the setup type (Default should be "Typical".)
10. The software will start installing. (Wait until install completes.)
11. Once the software installation has completed. Choose "Finish."
12. The system may ask if you want to restart your computer. If it does, make sure all important items open on your computer are saved, then choose "Yes" to restart it.
